
ACADEMIC PROSPECTUS

Programs, Curriculum, Faculty & Assessment

MISSIONS, NOT MAJORS. TUTORIALS, NOT LECTURES.

THE ARTEMIS ACADEMIC MODEL

The library is the intellectual heart of every College. Image: Unsplash

The University of Artemis operates on a fundamentally different academic model from traditional universities. Students declare missions, not majors. Learning happens in tutorials of 7 students, not lectures of 300. Assessment is competency-based, not grade-normed. The curriculum is built on four pillars — epistemology, computational thinking, global systems, and creative expression — that provide the intellectual foundation for any mission a student might pursue. The result is a university that produces not specialists in a single discipline, but thinkers who can navigate complexity, create across boundaries, and lead in any field.

THE FOUR CURRICULUM PILLARS

EPISTEMOLOGY

How do we know what we know? This pillar covers the foundations of knowledge: logic, evidence, argument, the scientific method, and the philosophy of knowledge. Every Artemis graduate can evaluate claims, construct arguments, and distinguish knowledge from opinion. Epistemology is not a subject — it is a skill that underpins every other discipline. Students study formal logic, Bayesian reasoning, research methodology, and the history of epistemological thought from Plato to the present day.

COMPUTATIONAL THINKING

How do we model, simulate, and solve problems with computation? This pillar covers programming, algorithms, data structures, machine learning, and computational modelling. Every Artemis graduate can code, analyse data, and think computationally about any problem. Computational thinking is taught not as a vocational skill but as a mode of reasoning — a way of decomposing complex problems into tractable components and constructing solutions that scale.

GLOBAL SYSTEMS

How do the interconnected systems of the world work? This pillar covers economics, politics, ecology, culture, and the networks that connect them. Every Artemis graduate understands the forces shaping the world and can navigate them effectively. Global Systems draws on political science, economics, sociology, anthropology, and

environmental science to provide a systemic understanding of how the world actually works not how any single discipline thinks it works.

CREATIVE EXPRESSION

How do we create, communicate, and persuade? This pillar covers writing, visual communication, music, theatre, design, and the creative process. Every Artemis graduate can express ideas clearly, create compelling narratives, and appreciate the creative work of others. Creative Expression is not a luxury it is the skill that turns knowledge into impact, that transforms analysis into action, and that gives voice to the mission each student pursues.

PROGRAMS OF STUDY

Diverse, global classrooms are the standard at every Artemis College. Image: Unsplash

The University of Artemis offers 55 degree programs organised into 10 schools. Each program integrates the four curriculum pillars with specialised coursework in the student's chosen field. Programs are designed around real-world missions, not artificial disciplinary boundaries. A student in the School of Global Health might pursue the mission "eliminate malaria in Southeast Asia" while taking courses in epidemiology (computational thinking), health policy (global systems), medical ethics (epistemology), and public health communication (creative expression).

- School of Epistemology & Formal Sciences
- School of Computational Sciences
- School of Global Systems & Policy
- School of Creative Arts & Expression
- School of Global Health
- School of Environmental Sciences
- School of Engineering & Applied Sciences
- School of Business & Social Enterprise
- School of Law & Governance
- School of Education & Pedagogy

THE TUTORIAL SYSTEM

The tutorial system is the signature pedagogy of the University of Artemis, adapted from the Oxford and Cambridge model that has proven its effectiveness for over 800 years. In a tutorial, a faculty member meets with 7 students for 90 minutes of intensive discussion, debate, and intellectual challenge. Students must prepare written work in advance, present their arguments, defend their reasoning, and respond to criticism. There is no hiding in a tutorial. Every student must think, speak, and engage in every session. The tutorial ratio of 1:7 ensures that every student receives individual attention and that no student falls behind without being noticed.

Tutorials are conducted synchronously across Colleges using the Artemis digital campus platform. A tutorial at 10am in Singapore is attended by students in Venice, San Francisco, Nairobi, and Mumbai – all in real time. The global tutorial model means that every tutorial benefits from diverse perspectives, every student experiences

multiple cultural viewpoints, and every faculty member teaches a truly global classroom. The synchronous model also ensures that academic standards are identical across all Colleges: the same tutorial, the same faculty member, the same expectations, regardless of location.

COMPETENCY-BASED ASSESSMENT

The University of Artemis uses competency-based assessment rather than traditional letter grades. Students are evaluated on their demonstrated ability to apply knowledge, solve problems, and create original work. Each program defines a set of competencies that students must demonstrate to graduate, and students advance by demonstrating mastery, not by accumulating credit hours. This approach eliminates grade inflation, ensures that every graduate has genuine competence, and aligns assessment with the real-world skills that employers and graduate programmes value.

Traditional Grading	Artemis Competency Model
Letter grades (A-F) with no standard meaning across institutions	Competency demonstrated through portfolio evidence and oral examination
Grade inflation: average GPA has risen 0.1 per decade since 1960	No inflation: competencies are absolute, not relative to peers
Credit hours measure time spent, not learning achieved	Advancement based on demonstrated mastery, not seat time
One exam determines outcome; bad days destroy transcripts	Portfolio assessment: multiple evidence points across time
GPA is opaque to employers; class rank penalises collaboration	Competency transcript shows exactly what a graduate can do

FACULTY MODEL

Faculty are recruited globally and rotate across Colleges. Image: Unsplash

The University of Artemis recruits 2,000 faculty members globally for its launch, with a target faculty-to-student ratio of 1:7. Faculty are hired on career-level contracts with competitive compensation (averaging \$90,000/year across markets) and rotate across Colleges on a 2-3 year cycle. This rotation ensures that every College benefits from diverse faculty perspectives and that faculty themselves experience the global network they serve. Faculty are recruited for both teaching excellence and active research agendas. Research time is allocated at 30% of the faculty workload, ensuring that Artemis is a research-active institution from Day 1. Faculty governance is exercised through the Academic Senate, which sets curriculum standards, degree requirements, and assessment criteria.
